Leland, 3.30 p.m.
Social Plains, 7.30 p.m.
Go to church. Because the church is God's way of saving, conserving and keeping humanity from moral degeneration.
Rev. Geo. A. Shields, Minister.

Tony Marto and Doyle Keenan, aged 12 and 14 years, of Praelate, who stole a car at Praelate, and broke the lock of a gas pump here for gasoline and broke into the pool hall and took smokes and chocolate bars, were arrested at Jenner, on Sunday, by Const. Barnes. They were severely reprimanded by the magistrate and fined and assessed the costs of the court.

GOLF DEFINED

Farmer (to friend): "I hear, Bert, that while you were in the city you took up this here golf. How'd ye like it?"
Bert: "Well, it ain't bad. It's a bit harder than hoe'n' turn'ups an' a bit easier than diggin' potatoes."

"Stop the Press!" commanded the constable as he drew up alongside of a roadside petting party.

Bill says: "Experience makes some folks wise and others only careless."

The Feeding Of Poultry On Range

In order to produce good poultry stock, it is necessary to induce a continuous growth throughout the growing season. To accomplish this, keep the flock comfortable, well supplied with good feed and abundance of water.

At the Central Experimental Farm, Ottawa, the growing stock is cared for as follows: pullets and cockerels are put on separate fields of clover or alfalfa which have been free of poultry for at least three seasons, during which time a series of crop rotations have been practised. This range of excellent green food is generally located beside a field of corn or sunflowers, or an orchard, where the chicks can get extra green food and grub, and have lots of shade during hot days.

The moveable range house, one that keeps the birds cool and comfortable during the warm and sultry evenings, is so constructed as to make fresh air constantly loosed. Plenty of growing space is provided. The water utensils are placed in the shade near the self-feeding hoppers. Five foot double hoppers, partitioned for mash, grain, shell and grit are conveniently located. The growing mash is composed of: bran, middlings, finely ground yellow corn and oat flour, equal parts, 1 per cent fine table salt, 1 per cent and liver oil and (on good range) 5 per cent animal feed mixture of ground meat scrap, bone meal, fish meal, milk powder and cod liver meal. The animal feed is varied according to the season or the rate sexual development required. The grain mixture consists of cracked corn, and wheat, equal parts, one half part of plumb oats. This method of feeding avoids waste and minimizes labour. It saves are quite numerous. It is good economy to close the whole grain section off the hopper and practice band feeding. The water vessels and hoppers

Mixed Train Service On Rosemary Branch

The Canadian Pacific Railway Co. is now operating a mixed train service on their new Rosemary Branch line. The train runs three times a week each way, leaving Bascom about 8.00 a.m. every Monday, Wednesday, and Friday, and returning Tuesday, Thursday, and Saturday. The train is of the mixed variety, consisting of passenger coach, express and baggage coach, and freight cars.

Argentina Dairying Progresses

The dairy industry in Argentina progressed during the past year and the increased home consumption enabled larger quantities of butter produced to be disposed of satisfactorily. Prices on the domestic market remained more or less stationary, according to "Business conditions in Argentina," by Ernesto Tornquist & Co. The quality of the butter produced continued to improve, owing to the neutralization and pasteurization of the cream employed, and it has at present attained a very high level. Recognition of this fact on the European markets has been duly forthcoming and it is possible to place the exportable surplus there without difficulty. England remains the principal export market, but there was a considerable demand from France. Italy likewise is promising to develop into a market for Argentine butter. On the London market Argentina butter met with a ready acceptance during the year and the prices realized were satisfactory, quotations being more nearly equivalent to those for the corresponding New Zealand product. The fine quality of Argentine butter has been greatly appreciated in France, where direct sales for the first time have been on a large scale, the prices obtained being generally some 2 to 3 cents higher than those ruling in London. Cheese exports continue low.

are moved to fresh ground occasionally. A copy of Bulletin No. 1 "Poultry Food and Feeding" should be in every poultry keeper's possession. It may be obtained, free, from the Publications Branch, Department of Agriculture, Ottawa, Ontario.
—Central Experimental Farm, Ottawa, Ontario

Fuego Oil Co. Progressing

Mr. A. O. MacArthur, manager of the Fuego Oil Co. Ltd., was a visitor in town, Tuesday, and reports that everything is going along fine at the well. The drillers have accomplished a skillful piece of work in successfully side-tracking the old casing that was lost in 1926 and are down now over 300 feet past the top of it. The company bought a new string of casing this spring and have already run nearly 2900 feet of it.

The crews this year are thoroughly trained men and have had wide experience in all well drilling and the present prospects are that the well will be brought in before very long.

Many people are now visiting the well and great enthusiasm is manifested in the prospects of obtaining production in the near future. Last Tuesday a pocket of gas was struck, blowing one and a half tons of tools, one hundred feet up into the casing.

"Here Us Is!" The Famous Duncan Sisters In "Topsy and Eva"

The romantic glamour of the old South, with happy negro slaves, a cruel Simon Legree deflected and the incomparable Duncan Sisters—that is the film fare to be presented at the Empress Theatre this week, when "Topsy and Eva" is shown on the screen.

The picture is a comedy version of "Uncle Tom's Cabin," the novel and play which historians credit with influencing the Civil War. But how different! The celluloid story is so given up to humorous situations and the buffooneries of Rosetta and Vivian Duncan that the source is almost forgotten.

Rosetta Duncan is seen as the black faced little slave girl, "Topsy" while her sister impersonates the sacharine and doll-like "Eva". Gibson Gowland, star of Eric Von Stroheim's "Greedy," plays the part of the money-lender, "Simon Legree"; Noble Johnson is "Uncle Tom." The rest of the cast include: Marguerite Daw, Nils Asther, latest "Bad" of Director Maurice Stiller, Myrtle Ferguson and Henry Victor.

Prisoners enjoy music and always listen eagerly for the opening bars.

Harry Leach, is attending the stampede.

Life Saving

During the Summer months there is nothing that youth enjoys so much as outdoor bathing. Whether the water is clean or the particular stretch of it safe is really a matter of little importance to it. Youth rarely takes time to consider consequences, and is rather scornful of the individual whose motto is "Safety First." In consequence, Summer after Summer young lives are lost that can be ill spared. Young lives lost in most every case.

Every child should be taught to swim. The younger the pupil the easier it is to teach. Quite small children rather resemble frogs, they instinctively strike out in the correct way when they find themselves in water. Instruction in swimming should form part of the education of every boy and girl.

It is a healthful exercise. It is a safeguard against accidental death by drowning. It may be and frequently is the means of saving life for others.

First Aid to the apparently drowned is nearly as important as the ability to swim. Instruction in the one means instruction in the other. Help protect the youth of Alberta by learning to swim. Literature on First Aid can be had free of

Automobile Accidents

The summer months of July and August undoubtedly witness the heaviest automobile traffic throughout Western Canada. It is during this period that tourist traffic is greatest with "foreign" cars in large numbers from other provinces and the United States crossing and re-crossing the prairies. They come from Provinces and States where traffic regulations frequently are different from those in force in these Western Provinces. During this mid-summer period, too, what we may term "domestic" traffic is at its peak. Roads are at their best, and following the closing of the schools many of our people tour "on family" while week-end journeyings to summer resorts are much in vogue.

While care in driving is at all times necessary, and with the steady increase in the number of cars in use is becoming a more and more vital matter, it is nevertheless the case that during these summer months extra care should be taken.

There are certain factors to which special attention should be paid, and the importance of which are reinforced as a result of careful investigation into the cause of auto accidents carried out during a period of years. For example, one would naturally suppose that the majority of such accidents occur on bad roads, at intersections, curves, and, but statistics prove that the majority of accidents occur on the so-called "safe" parts of the highways. Apparently drivers are careful on curves and badly surfaced roads, and let themselves go on the straight, smooth stretches.

Statistics compiled in the State of Iowa in regard to accidents are certainly illuminating.

10,666 accidents occurred on straight-away stretches where the drivers of the colliding cars had a clear view of the objects with which they were colliding.

7,285 occurred at intersecting roads, most of which were due to the fact that one or both vehicles approached the intersections at speeds too great to be checked upon perceiving the approach of the second car.

3,966 were caused by failure to grant the right-of-way at street crossings.

940 occurred on curves, caused by the drivers of the two vehicles going in opposite directions "hugging" the "inside" of the bend in the road to help them maintain high speed.

1,169 resulted from driving on the wrong side of the road.

717 were caused by cutting corners.

1,788 were caused while ascending and descending hills.

The roads were in the following conditions:

10,000 roads were good; 503 were rough; 2,190 were wet; 483 were covered with snow; 1,018 were dry; 136 were sandy; 51 were muddy.

These figures seem to fairly establish the fact that the better the roads, the greater the number of accidents. In other words, where roads are not good, drivers are forced to exercise care, and because care is exercised accidents are reduced to a minimum notwithstanding that conditions existing would naturally predispose accidents, but where roads are good, drivers become careless, even reckless, and, sooner or later, the inevitable result is an accident.

With the present insistent demand everywhere for more good roads, and a still higher standard of good roads, coupled with the increasing power of cars and their enormous increase in number, the accident toll on highways is mounting higher and higher. The cause is the very reverse of what might have been expected. It is not defects in car manufacture, because cars themselves are stronger than ever before. It is not road conditions which presumably might night a car, overturn or damage it.

No, it is the human element that is responsible for the mounting toll of accidents. Instead of reaping the benefit of the vast improvements being made, drivers are becoming more and more careless, taking ever greater chances, becoming less considerate of the other fellow's rights, determined to secure "speed" at all hazards.

Think it over the next time you are tempted to "step on the gas" for the sole purpose of seeing and boasting of what your car can do. It may do something you least desire and will forever regret.

Help Yourself

Help yourself and the world will thank you very badly. Help yourself means, things to help yourself, to help others, to help your job, and having other interests as well. It further means cultivating your brains by reading and learning something new. You will find plenty to occupy your time and thoughts, and thus you will never feel bored or dull.

Busy At Eighty-Two

At the date of 82, of Mrs. Flora Andia, at Springfield, England, recently, she had just finished her autobiography, had half finished a novel, and had just published another, "The Curse Of Eve," which gave views on social problems.

When Pain Comes

What many people call indigestion is very often nothing more than an attack of the stomach. The stomach nerves have been over-stimulated, and food sour. The corrective is an alkali, which sets the stomach acids instantly. And the best alkali known to modern science is Phillips' Milk of Magnesia. It has been the standard for over 50 years in creating relief in the 50 years since its invention. One spoonful of this harmless,

tasteless alkali in water will neutralize the excess of stomach acids, and the symptoms disappear at once. You will never use crumb tablets, or other pills, when you learn the efficiency of this. Go get a small bottle to try. Be sure to get the genuine Phillips' Milk of Magnesia prescribed by physicians for over 50 years in creating relief in the 50 years since its invention. direction—any druggist.

Work On Branch Line To Mine

Commence Laying Steel On Line To Sheritt-Gordon Property

Commencement has been made on the laying of steel on the branch from Cranberry Portage to Sheritt-Gordon.

According to information, a very large gang under Peter MacKenzie, started laying the rails on the 55½ mile stretch. Work will be rushed on the steel laying and it is anticipated that trains will be running into Cold Lake by September 1st.

The opening up of the Cold Lake branch will see active development on many mining properties lying between Cranberry and Cold Lake.

NERVE TORTURES

A Condition For Which Both Men and Women Suffer

Hardly any condition of ill health can cause more suffering and torture than nerve troubles. Men and women suffer from this condition in various degrees. It is shown for the sufferer, from the mistaken notion that the nerves can be controlled. Men and women who suffer from nerve troubles are often irritable, nervous, and restless. It is not their fault. Their poor health is the cause. The nerve-troubled man or woman, whose household cares and mother's work, the breadwinner whose anxieties have worried him until he is really ill, are among the nerve sufferers who become run-down. Their nerves, like all bodily organs, need rest, red blood. In all such cases, the best and simplest treatment is a course of Dr. Williams' Pink Pills, which builds the blood and builds up the nervous system. Mrs. M. C. Cross, Richmond, Que., tells how this medicine ended her nerve troubles. She says: "I have suffered from nervousness and sleeplessness for the last hundred and one things which make a condition make life a misery. The first thing I found to help me was Dr. Williams' Pink Pills. Under their influence my nerves grew stronger, the dizzy spells grew less frequent, and I became brighter and more cheerful. I took the pills for some time and found that they cured the blood, built up the nerves and are a fine medicine for both old and young."

You can get these pills through any medicine dealer or by mail at a box from Dr. J. C. Williams, Medicine Co., Brockville, Ont.

Five Points For Britain

Has Designed, Equipped and Operated

Fastest Modes of Travel. It is certainly a most remarkable fact that at this moment the fastest aircraft in the world (the seaplane which won the Schneider Cup) is the fastest craft on water (Miss England), the fastest motor car (the Golden Arrow), the fastest passenger liner (the Mauretania), and the fastest locomotive (a G. W. R. Express), are British all five—British designed, equipped and operated. We are glad that the British government's exhibit at the Toronto National Exhibition this year will show five models to remind the world of it.

Cramps Diarrhoea Pains in Stomach

Mr. Roy Lightland, Windsor, Ont., writes: "I became very ill; my appetite, had cramps, diarrhoea, and severe pains in my stomach."

"I purchased a bottle of DEFOULERS, a WILD STRAWBERRY, and it cured me."

"I cannot praise 'The Extract' too highly, and will never be without a bottle of it in the house."

"It is pleasant to take and acts very quickly."

"My brother had the same experience with it as I had."

"Dr. Fowler's" has been on the market for the past 84 years; you will find it in every drug store. Price 50 cents a bottle at all dealers; put up only by The T. Milburn Co., Ltd., Toronto, Ont.

Wheat Pool Elevators

When the three provincial units of the Canadian Wheat Pool have completed their 1929 building programme they will be operating a combined total of 1,008 country elevators with a capacity of from 30,000 to 45,000 bushels each. Of this number 1,003 will be in Saskatchewan, 390 in Alberta, and 163 in Manitoba.

For samples—supply Minard's Liniment.

It is complained that many business men write illegibly. A really busy man of course, has not time to be constantly consulting a dictionary.

One of the commonest complaints of infants is worms, and the most effective application for them is either Glycerine Worms Extremator.

Britain Has New Industry

Factory In London, England, Makes Starshells Four From Beans

A factory now completed in North London, marks the beginning of a new British industry which might well attain the importance acquired in recent years by sugar beet and even artificial silk. There flour will be made from soy beans, whose acknowledged nutritive value has now been claimed, been made consistent with digestibility.

The soy bean is nearly all protein and it is devoid of the starch which dyspepsia in most countries attributed. In protein it is four times richer than the best wheat, and two times richer than the best corn. It is tasteless, and in taste it resembles one of the almonds, and bread containing it keeps longer than the ordinary bread. The probability is that it will be used also, as in Austria, for biscuits and confectionery, and the making of a new kind of chocolate.

Cars For Bolsheviks

Stated That Henry Ford Will Produce 500,000 Autos For Soviets

Henry Ford is to produce 100,000 cars for the Soviet Republic. Under terms of a contract signed recently and made public in New York.

The contract will run for nine years and the factory will be established in Russia. Only the Ford passenger model "A" and the Ford truck model "B" will be manufactured. More trucks than passenger cars will be produced.

The factory is to be located at Nizhny Novgorod, on the Volga river, and will be completed within four years.

For Burns and Scalds.—Dr. Thomas' Electric Oil will take the place of a Russian balm. It can be had in every kitchen so that it may be available "any time" when it is no preparation required. Just apply the oil to the burn or scald and the pain will cease and in a short time cure altogether.

New Picture Film Invented

Can Be Made Of Cloth and Is Said to Be of Great Value

The housewife of the near future may say to her servant:

"Bring me those photos of father in the wash and hang them on the line to dry. Be sure to iron them tomorrow, for he is coming on a visit and I want them to look nice and fresh."

Exactly that can be done with a new kind of picture film invented by Dr. R. B. W. Hochstetler, head of the Hochstetler laboratories.

He is not using the invention for household purposes, but instead is making it to produce a new kind of motion picture film, and radio transmission of sound, photos and motion pictures. Several new processes are involved.

The first is making photographic film out of cloth, so that it is washable, ironable and non-inflammable. He says that cotton, silk, linen or even paper can be used.

Along with the new film Dr. Hochstetler announces invention of a process for reflecting sound and pictures from the face of the films, instead of transmitting light from them. This also has a different method of amplification of sound, to get further away from distortion.

The use of Miller's Worm Powders insures healthy children so far as the ailments attributable to worms are concerned. A high mortality among children is traceable to worms. These say the strength of infants to maintain the battle for life and succumb to weakness. This preparation gives promise of health and keeps it.

Better Study Geography

The Saskatoon Star-Phoenix received a letter from the assistant editor of the National Geographic Magazine, Washington, D.C., in which reference was made throughout to "Saskatoon, British Columbia." If all the other information published in National Geographic is equally as accurate as the above, it is no cause for wonder that the Americans picture Canada only as a land of igloos and Eskimos as a country of beer mugs and plus-fours.

Keep Minard's in the Medicine chest.

Machinery For Shearing

Hand Clippers Used In Australia One On Pedigree Sheep

Australia's wool clip this season is estimated at about 900,000,000 lbs. from about 100,000,000 sheep. The great bulk of the shearing is done by machinery, although, in the case of pedigree sheep, hand-clippers are generally used to ensure a cleaner job, and even cut. W. H. Macdonald, inventor of the shearing machine, went to Australia from England in the middle of last century. He took up sheep farming soon after his arrival, and brought his first patent in 1874. With the machine shears now in use, an average worker can cut 100 fleeces per day, and totals up to 200 are fairly common.

Ambitious Project

Plan To Pipe Gas From Alberta As Far East As Winnipeg

W. S. Heron, oil operator, announces that a plan for piping gas from Alberta to Winnipeg, serving also Regina, Moose Jaw and Saskatoon, is under consideration. He says that the cost would probably be \$50,000,000 and that eastern Canadian and N.Y. capital is interested.

After 10 Years Of Asthma Dr. J. D. Kellogg's Asthma Remedy proved the only relief for one grateful user, and this is but one case among many. Little wonder that it has now become the one recognized remedy on the market. It earned its fame by its never failing effectiveness. It is earning it today, as it has done for years. It is the greatest asthma specific within the reach of suffering humanity.

May Have No Thrills

Nothing is really attractive unless it has the element of risk. This makes one look to the future with melancholy. Every day things are becoming safer and safer. Even aviation some day will be safe and sane. The sea is getting safer yearly. The risks of railroading are diminishing rapidly. What will our grandchildren do for their thrills?

Corns are caused by the pressure of tight boots, but no one need be troubled with them long when he simply uses a Holloway's Corn Remover as helpful.

The Helpful Wife

Sporting Goods Salesman—"Something in golf mud?"

Lady—"I want to see some large-sized handicaps, please. My husband says that if he has a large enough handicap for tomorrow he'll win the game."

Minard's Liniment for Sick Animals

"The amusing part of it," says the Farmer's Advocate, is that some of those city fellows who know how a farm ought to be run, plant a bag of potatoes and harvest a bushel."

Fourth—Gypco your poultry house

Your flock will have better health, and year-long protection from fire, cold, heat and vermin.

Fifth—Line your grain-bins, barns, stables and other buildings with Gypco. By doing so you will make them more valuable, fire-safe, cold resistant and 50 per cent more beautiful for your stock to live in.

First—Buy a supply of Gypco

Fireproof Wallboard. Then erect Gypco partitions in your attic, changing the waste space into an additional room or two. Imagine how much more comfortable the family will be with the attic converted into a clean, inviting study.

Second—Renovate the lower

Treatment Accorded To Tourists Bringing Them In Greater Numbers

Every discrepancy to a tourist, every overcharge and every attempt to "sneak" him acts like a chain letter condemning Canada, for he tells his friends and they tell theirs. The steadily increasing number of tourists indicates that the "chain letter" has been of a different type, and that the visitors of other years have mostly gone home with golden reports of the treatment accorded them. In regard to the above, it is interesting to point out that American money last summer was at a considerable discount but the merchants here accepted the money at par and paid the discount themselves at the bank. This was courtesy, also good business.

For Frost Bites and Chills.—Chillblains come from undue exposure to wind and cold and frost-bites from the icy winds of winter. In the treatment of either an excellent preparation is Dr. Thomas' Electric Oil, as it gives relief, soothes inflammation and relieves the pain. The action of the oil is prompt and its application is extremely simple.

Mapping By Photography.—The camera has been used by the Topographical Survey, Department of the Interior, as a means of gathering topographical data in the field for mapping purposes, for the last forty years.

Fourth—Gypco your poultry house. Your flock will have better health, and year-long protection from fire, cold, heat and vermin.

Fifth—Line your grain-bins, barns, stables and other buildings with Gypco. By doing so you will make them more valuable, fire-safe, cold resistant and 50 per cent more beautiful for your stock to live in.

First—Buy a supply of Gypco Fireproof Wallboard. Then erect Gypco partitions in your attic, changing the waste space into an additional room or two. Imagine how much more comfortable the family will be with the attic converted into a clean, inviting study.

Second—Renovate the lower rooms by installing Gypco right over cracked and faded walls. You can decrease the fat, smooth Gypco surfaces with Alabaster, paint or any other finish. And what a difference it will make to your home.

Third—Look about for cracked, warped or rotted walls, partitions and ceilings and repair with Gypco. Such repairs are quick and inexpensive to make because Gypco saves nails and cuts so easily—saving time and labor.

Fourth—Gypco your poultry house. Your flock will have better health, and year-long protection from fire, cold, heat and vermin.

Development of Highways In the Three Prairie Provinces Presents Difficult Problems

Before the end of 1929 there will be between four and five thousand miles of permanent highway in the prairie provinces. The problems connected with road building on the prairies have not been few. In the first place, the area to be served will even be the most ordinary roads, was so tame. One of the first efforts of a community is to cut out a road connecting it with town and school and during the pioneering years there is little further work done. Possibly a few logs are laid across a water hole and some dirt thrown over. The technical name for this sort of road is "corduroy," the reason is obvious and one's sensibilities are "touched" by the corduroy road, whether manoeuvred by lumber wagon or motor car.

But with the increase in motor cars, and the consequent increase in motor travel, there was an insistent demand for better roads, roads that would be possible in all sorts of weather. It costs time and money to build up for several days or weeks waiting for the good roads, the motorists, whether on business or pleasure bent, require all-weather roads.

Before the days of Government highways, and when all roads were under the jurisdiction of the municipal councils, some municipalities with a forward disposition would let roads than others. Some even put gravel on well graded and well drained surfaces, and so here and there would be a short stretch of permanent road. But the net municipality might have a council not interested in permanent roads, or if so, wanted a road that ran north and south rather than one which went east and west connecting up with the road built by municipal "A." So these odd bits of good road helped not at all in the highway development of the province. It had to be a provincial government undertaking and a provincial plan, and an impetus was given by the grant of aid to the provinces some years ago by the Dominion Government and based on the standard of road. So much effort has been made to overcome the difficulties of roadmaking in alluvial soil in one place, or where growing gumbo in another, or forest covering areas with countless rivers to cross in another, and the result will presently be a gravelled highway from Fort William to Vancouver through the southern parts of the province and a road from Winnipeg northwest to Jasper, and some day on to Prince Rupert and down to Vancouver, making a huge triangle that will tap all the cities of Western Canada.

At present there are north and south gravelled highways from Emerson to Winnipeg, and then north to Lake Winnipeg; a road from Edmonton to Calgary, south to the International Boundary, and north to Athabasca Landing, to which the Athabasca River makes a big south-erly sweep before passing north again toward its ultimate goal in the Arctic Ocean. There its waters finally empty after some twenty hundred miles of wandering through, and around mountains, past miles of forests and millions of tons of tar sands which some day will provide the covering for all weather roads throughout the prairies.

Already the traffic is so heavy on some of these prairie highways that the governments are worried over the necessity of incurring further capital expenditure for asphalt roads. It is an economic fact that when the traffic exceeds a certain number of cars a day, it is not economical to have paver roads, but to pay the cost of upkeep on gravelled roads.

Each province has its own road policy, but in each the effort is to provide all-weather trunk highways which are of the best use to the people living within the province as well as to the tourist and also provide good market roads for those who have made their home within the province. Each is groping for some system of conserving gravel high ways, and each is hesitating over

tremendous capital expenditure of paving. But so universal is the traffic on Western Canada roads that if some of the old schemes do not prove themselves shortly, it will be necessary to pave—Montreal Herald.

Might Work Another Way

Canada's Attitude Toward Titles Should Apply To Monetary Degrees

One Canadian university which in past years has been decidedly free with hoary degrees announced that if it would confer none in June of the present year, wherefore many people of the Dominion will feel constrained to break into loud applause. Knighthoods have been abolished in Canada, and it is high time that Canadian universities ceased creating any more LL.D.s. Of course there are knighthoods that would be approved on all sides, just as there are honorary degrees that would commend themselves to everybody, but the trouble is that both the King's advisers and men at the head of universities have often shown a want of discrimination.

Not Becoming Wealthy

So Far Lindbergh's Official Position Has Noted Him Nothing

Charles A. Lindbergh is not getting rich very fast from his position as adviser an aeronautics to the Department of Commerce.

Assistant Secretary MacCracken said Lindbergh has not drawn one cent in salary since his appointment about five months ago.

He is allowed \$25 a day when his services are sought by the Commerce Department. "Otherwise he gets nothing," MacCracken explained, "but no problem had arisen which required Lindbergh's advice."

SMALL BLOOMER DRESS

Printed linen takes its place in the mode and is used for a most unusual bloomer dress for the growing miss 6 to 8, 10, 12 and 14 years. The back of waist extends over skirt front, forming yoke effect. The short and sleeves are a new style feature. Collar can be made in plain or scalloped outline. Price of the attached two-piece suit, with smartly pressed pants, allows for own coin preferred. Wrap can be made. When you send for this pattern, you enclose to our Spring Fashion Magazine. It's just filled with delightful styles, including smart ensembles, and cute designs for the kiddies.

Excellent Films Supplied By Government Should Be Shown

As for the other matter, the type of moving pictures presented to Canadian audiences, an interesting and valuable suggestion is made—namely, that the excellent films in possession of the government, Dominion and provincial—which are at present available for exhibition in the schools, should be shown also to the general public. Whenever there is a suggestion of "educational" films, the answer is always made that the producers and theatre managers are catering to popular taste—that it is a case of supply and demand. But there is little doubt that the appetite for low-grade pictures grows by what it feeds on. The sentimental, nauseating rubbish which is served up to patrons has a lulling effect, especially on immature minds. The suggestion made by Col. C. H. McCullough, that one of the local school authorities might be engaged for a weekly showing of these interesting government films, must meet with approval at any rate, be possible to make suitable arrangements—Hamilton Spectator.

W. H. Askew, wealthy Laird of Ladykirk, near Berwick, who is devoting large sums of money for the purpose of enabling worthy British to come to Canada in agricultural placement, arranged by the Department of Colonization and Development, Canadian Pacific Railway, "Make good," said Askew to a large group of colonists whose movement he made possible, "and you will be giving me all the thanks I ask."

Trying To Develop Hardier Strawberries

Plant Breeders Are Now Turning To Wild Variety

All the strawberries in Canada and the United States and most of the world—that is, the cultivated ones—are descendants of two wild strawberry, one a native of the Pacific Coast, and the other a native of the eastern United States.

There are many other wild strawberry, however, that did not take part in developing our present kinds. In the untamed wild one may turn some valuable trait that can be bred into our domestic varieties which may make them even more desirable than they now are. At any rate, plant breeders are turning to the wild sorts for improving the strawberry, especially to develop new types better adapted to such specific purposes as canning, preserving and candy making.

A Long Story

Don't get impatient if you find serial stories in newspapers and magazines rather long. Suppose you got interested in "The Mountain Pass" and wanted to finish it. This historical novel by Nakamoto Kusan was running for 13 years in Miyoko, a Tokyo newspaper, and the end is nowhere in sight. Up to date the story fills 25 volumes.

Would Care For Blind

The Manitoba government is anxious to have the old age pensions extended to blind persons needing assistance. Hon. W. J. Major, attorney-general of that province, urged the extension on Hon. Peter Hooper, minister of labor. Mr. Hooper promised sympathetic consideration when in Ottawa.

SHORT BUT TRICKY

No. 4, Carrell—230 yards, Par. 3

This hole on the Jasper Park Lodge Golf Course, Jasper National Park, Alberta, over which the Canadian and Western Canada Amateur Championships will be played from Aug. 19-24 this summer, is more difficult than it seems. The green is well trapped and the long driver is sure to find trouble.

The fact that the Western Canada Amateur also takes place over this course at the same time as the Dominion event, assures all golfers, no matter how high their handicap, of lots of competitive play.

The photograph shows the hole from No. 1 (championship) tee, and the panel is the hole in detail, with yardages to scale below it.

Educational Films

Excellent Films Supplied By Government Should Be Shown

As for the other matter, the type of moving pictures presented to Canadian audiences, an interesting and valuable suggestion is made—namely, that the excellent films in possession of the government, Dominion and provincial—which are at present available for exhibition in the schools, should be shown also to the general public. Whenever there is a suggestion of "educational" films, the answer is always made that the producers and theatre managers are catering to popular taste—that it is a case of supply and demand. But there is little doubt that the appetite for low-grade pictures grows by what it feeds on. The sentimental, nauseating rubbish which is served up to patrons has a lulling effect, especially on immature minds. The suggestion made by Col. C. H. McCullough, that one of the local school authorities might be engaged for a weekly showing of these interesting government films, must meet with approval at any rate, be possible to make suitable arrangements—Hamilton Spectator.

Stubble Burning Warning

Extra Precautions To Be Taken Against Spread Of Fire

"Exercise care in stubble burning. Burning fires cause damage to the property of others." This is the tenor of a province-wide educational campaign which has been instituted by the Fire Commissioner of Saskatchewan in an attempt to reduce the fire losses from stubble burning which have been alarmingly high during recent years.

The Prairie and Forest Fires Act requires that the stubble be burned not be completely surrounded by a fire-guard not less than 20 feet in width, and the fire must be guarded by three adult persons. This law, in the future, is to be more stringently enforced.

Warm combined or sweaters have been used and the stubble is longer than ordinarily, the Fire Commissioner warns, "extra precaution should be taken."

Finds Ivory In Yukon

Most ivory hunters go to Africa and shoot elephants, but Jack Elliott seeks his prize in the valleys of the Yukon, and the tusks and bones he had there belong to animals that have been dead for thousands of years. Elliott went into the Yukon when the first flush of the gold excitement had passed. He did not find gold, as hundreds of his predecessors had failed to do, but he did dig in the creek beds and he found another treasure there.

Prodigal Father. I've a notion to settle down and go in for raising chickens.

Father—Better try you. Their horses would suit you better.

The best way to avoid tire troubles is to ride in a friend's car.

Believed Fort Norman Region Offers a Great Oil Reserve Which May Be Used in Future

Closely Connected With Agricultural Market

Empire's Greatest Hotel Will Buy Bulk Of Supplies In Canada

"That the erection of the tallest building in the British Empire should have any direct connection with the market for Canadian agricultural and food products of the highest quality is something not directly apparent on the face of it. The tallest building in the Empire is, however, also the Empire's greatest hotel, the Royal York, in Toronto, which was recently opened. The Royal York's annual bill for foodstuffs will be in the neighborhood of \$750,000, the greater proportion of it to be spent in Ontario or the Dominion as a whole.

Live lobsters will come from the Maritime special crates, and salmon, times a week. Salmon from the Saguenay is already ordered. Hundreds of gallons of the finest Canadian maple syrup will be used in the creation of special Canadian dishes. A supply of millions of ultra-fresh eggs is secured. Canadian beef and lamb, selected on the hoof, can be equalled nowhere else. Canadian fruits and vegetables will be brought from various sections of the Dominion famed for their own particular output. As a matter of fact, a painstaking survey of Canadian delicacies has been made on behalf of the new hotel with the idea of bringing out dishes and produce to the attention of the thousands of visitors and guests. Investigation has shown how surprisingly few materials have to be imported even to cater to the fastidious tastes of the gourmet who has eaten excellently in all parts of the civilized globe.

Imperial Oil Limited, pushed its development work with enthusiasm and kept sending in new rigs and material over the 1,400 miles of line between Edmonton and Fort Norman. One season they used airplanes to help them with their communications. In one season freight bills alone amounted to \$180,000.

Investigate Clay Resources

Survey To Be Undertaken In Saskatchewan This Season

Survey and test of the clay and other non-metallic mineral resources of Saskatchewan, conducted during recent years by Prof. W. G. Worcesster, in the Ceramic Department of the University of Saskatchewan, under auspices and direction of the Provincial Department of Railways, Lakes and Industries, will be continued during this summer.

A tentative programme of investigation, exploration and test already has been prepared for the summer's work. This calls for a brief reconnaissance survey along new branch lines of the Canadian Pacific Railway in the Wood Mountain district, whence samples of clays, bentonite, and various soils will be taken. The work completed, a more rigorous survey in the Cypress Hills area probably will be undertaken. The oil signs in the clay are attracting to it special attention, while it is also proposed to investigate the clays in the white mud beds of the Frenchman River.

The programme as outlined envisages a survey of the non-metallic materials in the more favourable districts of Northern Saskatchewan to which attention is directed by the possibility of early railway transportation. The Redoubt Lake and Lac la Poudre areas will be covered, as also will the territory which the proposed railway line will traverse.

Atlantic Coast Not Sinking

The old question of whether the Atlantic Coast is sinking into the sea is said to be settled once and for all by the final report of a group of geologists who have been studying the problem for a period of five years. According to results of the investigations, the stability of the coast has been established. Scientists from time to time have predicted that New York City some day would sink into the sea, and theories have been debated among geologists for years.

Real Old Timer

Arriving in the Edmonton District in 1877 from Deschambault, Quebec, Amond purchased a 288 acre farm for a cayuse and saddle. Mr. Amond has just celebrated his 70th birthday. He is a veteran of the Royal North West Mounted Police, and is still living on the farm which he purchased from the halfbreeds in 1880 for the consideration mentioned.

First Artist—Old Rodley wouldn't my pictures—wouldn't even look at them.

Second Ditty. Well, he was more considerate of your feelings than I am. He refused to buy my pictures even after he looked at them.

A Small "Cracking" Plant of sufficient capacity to distill gasoline for the motor boats which ply the Mackenzie River during summer may be built this summer a short distance from the Arctic sea.

The Hudson's Bay Company boats which leave McMurtry and Fort Smith on their voyage down to the Arctic may carry the nucleus of a refinery. The company has investigated the feasibility of taking such a plant into the high north, and it is held probable that within the present year crude oil from Canada's highest north oil field will be supplying gasoline and other fuel for the various shipping and other operations in the north.

Just before the war the late Dr. T. O. Benson, well-known British geologist, visited the far north, making his way down the Mackenzie to the Arctic. He came back with news of possible oil structures near Fort Norman. Then came the war and it was not until 1919 that the Imperial Oil Limited, sent in a crew with a light drilling rig. As may be imagined, the transportation problem into this country was daunting.

On what was afterwards known as Discovery Range, fifty-three miles north of Fort Norman, the crew drilled the first well to a depth of 910 feet, at which mark they struck oil sand with a gas flow. This well flowed in "heads" or spasmodically when crews gathered collected to force the oil to the surface.

Rumors floated up the river to the effect of a big oil gusher and a rush for the field was started, men making their way in even during the winter months. The well actually did increase production to about 100 barrels of high grade crude oil after being deepened.

Imperial Oil Limited, pushed its development work with enthusiasm and kept sending in new rigs and material over the 1,400 miles of line between Edmonton and Fort Norman. One season they used airplanes to help them with their communications. In one season freight bills alone amounted to \$180,000.

Several dry holes were abandoned at this point along the river, but Discovery No. 1 increased production and Discovery No. 2 was drilled.

It is the opinion of many oil men that the Fort Norman region offers a great reserve of oil on which Canada may depend in the future. With mining development pushing towards the Arctic, it is not too much to predict that before many years ways are made will be found to bring the Arctic petroleum to market.

Fort Norman oil is 35.6 degrees Baumé gravity, with paraffin base and is extremely high in gasoline content. It remains fluid at 90 degrees below zero, having a natural temperature of 12 degrees above zero Fahrenheit.

Must Work On Roads

Every man in Jugoslavia must give his services for six days in every year for road making, according to a new Government decree. Owners of auto trucks and horse-drawn wagons must lend their vehicles for three days each year. According to Premier Jivkovic, the country's most pressing need is a first-class modern system of roads.

Could Pool Resources

Frank: "Is it true that you are engaged to three other men besides me?"

Frances: "Why?"

"I was thinking the four of us might raise enough by chinking together to buy you an engagement ring."

You look very sad.

"So would you be. I dreamed that I should die in a week."

"Whisper of your feelings that?"

"A month ago."—Moustique, Charleroi.

WORLD HAPPENINGS
BRIEFLY TOLD

Newfoundland's recently authorized \$500,000 five per cent. loan was awarded to the Bank of Montreal on a bid of 96.25. The government regarded the terms as favorable.

Prince Charles, second son of King Albert, was fined 100 francs (about \$4) for not voting in the Belgian provincial election in accordance with Belgian law.

Caught between a conveyor and a mixer in the Flin Flon mine plant, Jacob Holt was dragged to his death. His clothing became caught in the bucket carrying device when he was working about the machine.

Some early moves looking to reduction of international naval armament are confidently expected in informed circles at Washington, to be made by the United States and Great Britain.

The Ontario Government's agreement with the Federal government on old age pensions was formally signed by Premier G. Howard Ferguson, and Hon. Peter Hensley, federal minister of labor. The act becomes operative November 1.

One of the largest diamonds found in the South African fields was recently brought to Kimberley from Barkley West for valuation. It weighed thirty-three and one quarter carats and sold for \$12,300. This is believed to be a record price per carat—\$400.

Baking tests of Garnet wheat, shortly are to be carried out in the United Kingdom, and will be observed by L. H. Newman, Dominion cerealist, who leaves from Montreal, on the Montrose. Mr. Newman may also go to Hamburg and other European grain markets.

Channel Tunnel Plan Favored

Would Help To Solve Unemployment Problem In Britain

Construction of a tunnel under the English Channel to connect England and France by rail is one of the schemes which H. Hon. J. H. Thomas has his eye on in connection with his plans to solve the British unemployment problem. Mr. Thomas has been delegated by the new premier H. Hon. J. Ramsay MacDonald, to direct the new Labor government's work in dealing with the unemployment situation.

He is organizing a new government department of employment and is obtaining reports on a number of projects which might supply work for some of the men now unemployed as a preliminary to calling in experts from all the government departments.

With the aid of the experts he hopes to frame definite plans for road-building, housing development and railway reconstruction. At the same time he is not to forget education and the development of the Empire and the part they may be made to play in reducing the army of unemployed.

Products Of Canada's Farms

The four leading items in the total agricultural production of Canada in 1928, valued in all at \$175,704,000, are: Field crops, \$1,099,781,000; dairy products, \$250,000,000; farm animals, \$197,886,000; and poultry and eggs, \$104,041,000. Last year was the first year for poultry and eggs to exceed \$100,000,000 in value. Since 1923 there have been increases in value from \$82,000,000. Value of farm animals in five years has advanced \$72,000,000.

Most Obedient

Mamma: "And were you a nice boy at the party?"

Bobby: "Yes, mamma."

Mamma: "You didn't ask twice for anything at the table, did you?"

Bobby: "No, I didn't. I asked once, and they didn't hear me, so I just helped myself."

"What has happened to you? Shall I take you home to your wife?"

"Thanks, I have just come from there."—Evan Humer, Madrid.

W. N. 57, 1790

A Forest Of 2,000 B.C.

Ancient Douglas' Fir Standing At Bottom Of Lake In Oregon

An unexplored wilderness of Douglas' fir tree stands upright on the bottom of Clear Lake, in Linn County, Oregon—probably green and flourishing in 2,000 B.C. These trees, we are told by John D. Guthrie, writing in *American Forests* (Washington), were growing in a little valley high up in the Cascade Range, when about 2,000 B.C., or before, there were eruptions from many peaks along the crest. The peaks belched forth lava, and the molten stream spread out over thousands of acres. A tongue of this flow must have run into the little valley of the McKenna, and almost filled it. Then:

"The heat may have killed the Douglas firs in the valley, or they may have been literally drowned by the rising waters. In any case, the river gradually filled the little valley above the lava dam, submerging the fir trees, and formed a lake about a mile long."

"The Douglas fir trees are still standing on the bottom of the lake. The waters are the coldest of any of the Cascade lakes, and crystal-blue, so that the bottom shining white with the volcanic ash of long ago, seems but a few feet below you. With the air excluded, these old trees have been perfectly preserved through all these centuries, and to-day the wood is readily identified. It is sound as when cut, no breaking down of the woody tissues whatever, nor any evidence of infiltration of any kind!"—Literary Digest.

To Protect Civilians

International Red Cross Commission Will Start World-Wide Propaganda

A world-wide campaign for the protection of civil populations against the future possibilities of aerial and chemical warfare is to be inaugurated soon by the International Red Cross Commission. The movement, which takes the form of world-wide propaganda to acquaint civil populations with the dangers of aerial and chemical warfare and world-wide competitions for the perfection of new means of defense against such attacks.

You'll be attracted by its simple sophisticated lines with Viomont neckline and lower edge of bodice at waistline shirred with bow trimming. It adapts itself beautifully to the season's newest fashions in printed silk crepe, plain silk crepe, printed rayon, crepe satin, crepe de chine, rayon printed voile, handkerchief linen, printed poplin, ginghams, check cotton or silk crepe, georgette crepe, and canton-cloth crepe. Style No. 462 is designed in sizes 18, 20 years, 22, 24, 26, 28, 30 and 32 inches tall. It is made with 1 1/2 yards of 40-inch material with 1 yard of 36-inch contrast material in 36-inch size. It has two major parts to pattern, which means practically no side and shoulder seams to join. Price 25 cents in store or coin (coin preferred). Wrap coin carefully.

We suggest that when you send for this pattern, you enclose to us additional for a copy of our Spring Fashion Magazine. It's just filled with delightful style ideas, including smart ensembles, and cute designs for the kiddies.

RIGHT HON. RAMSAY MACDONALD
Leader of the Labor Party and Premier of Great Britain.

Recipes For This Week

(By Betty Barclay)

OATMEAL DROP CAKES

- 2 1/2 cup butter.
- 1 cup sugar.
- 2 eggs.
- 1 cup milk.
- 2 cups rolled oats.
- 2 1/2 cups flour.
- 1 teaspoon baking powder.
- 1/2 teaspoon salt.
- 1/4 teaspoon cinnamon.
- 1 teaspoon nutmeg.
- 1 cup chopped seeded raisins.

Cream butter, add sugar, eggs well beaten, milk and rolled oats. Mix and sift dry ingredients. Add flour mixture to first mixture, thoroughly mix. Drop by spoonfuls on a greased baking pan and bake in a rather hot oven. This makes 32 to 36 cookies.

NEW YORK SALAD

- 4 slices pineapple.
- 1/2 cup celery.
- 1/2 cup milk chocolate.
- 2 oranges.
- 2 Cream mayonnaise.
- Lettuce.

Arrange slices of pineapple on nests of lettuce leaves. Cut celery in slender strips, one and one-half inches long, and mix with milk chocolate. The center of pineapple, and garnish with four sections of orange free from membrane, laid symmetrically on pineapple. Pairs dressing separately.

'Talkie' Novels Now

People Can Enjoy Book Without Trouble Of Reading It

Talkie novels have come as the natural sequence to talkie movies. The first talkie novel is a story "Artaban" by Andre Cayatte, and has been put up in a series of phonograph records, each record containing a chapter. The story is related by the author.

Several others are in preparation, but the plan has been changed by using men and women to recite the lines of the characters of the novel, to do every thing with "say" and "say he."

Editors of the talkie novels predict a great future, principally because it will now be possible to enjoy a book without even the effort of turning every page.

New Yorks Are Common

Americans may believe there is only one New York, but England has three and Scotland one. English recently claimed a New York in Kent. Lincolnshire and Northumberland counties and immediately all good Scotchmen pointed to their New York on the western shores of Loch Awe.

Offered High Position

Clarence Chamberlain, trans-Atlantic firm, wants a young woman secretary who will do her stenographic stuff in the air. He is willing to "iron out" the bumps and make the work as pleasant as possible. His frequent and long-distance flights, he says, necessitates the engagement of an air secretary.

Canadian Journal Of Research

Bi-Monthly Publication Has Been Launched By National Research Council

The National Research Council of Canada, now actively in operation under the presidency of Dr. H. M. Tory, has commenced the publication of the "Canadian Journal of Research," a bi-monthly scientific magazine, the first issue of which came out January 4.

The journal is to furnish a means for publication of the scientific papers resulting from the activities of Canadian universities, the National Research Council, and the research agencies of Canada, which hitherto, have been dependent on foreign journals already over-crowded as a result of the activities of their own scientists.

The first issue opens with "studies on the nature of rust resistance in wheat," with three papers by R. Newton, professor of Field Crops of Alberta University, and J. V. Lehmann, and A. E. Clarke, post graduate students of that university. It is the contribution of the laboratories of the University of Alberta.

These studies form part of a co-operative attack on the problem of cereal rusts in Canada which cost the Dominion millions of dollars loss every year. This research is being carried on jointly by the council, the Dominion department of agriculture, and the universities of Alberta, Manitoba, and Saskatchewan.

The Journal also carries a study of the "Hydration of the aluminates of calcium," by Prof. Thorber Thorvaldson, of the University of Saskatchewan, and Norman S. Grace, a post-graduate student of the university.

"Vaccination against tuberculosis with baccillus calmette-guerin," is a contribution by A. C. Rankin, Dean of the Faculty of Medicine and Professor of Bacteriology and Hygiene in Alberta University. It covers four years' work on B.C.G. vaccine, during which 250 calves were made the subject of experiment. The vaccine was found to be entirely harmless and the tuberculosis lesion in vaccinated calves were found to be in general much less pronounced than those in unvaccinated animals. Brooker Knap, assistant professor of Biology at Queen's University, Kingston, contributes a manuscript on the effect of the ultra violet light on sunlight on certain marine organisms.

Synthetic Gem Factory

The German eye trust has now taken up the manufacture of synthetic precious stones. The plant is near Bielefeld, and can fill the growing demand for jewels. It is only a question of time and care in manufacturing before stones of 300 and more carats will be produced. The process itself is a secret.

More than two-thirds of all astronomical observations are made nowadays with the aid of photography.

Opportunity for
British Traders

Canada Offers Good Market For Empire Made Goods

The great bulk of Canadian imports come from the United States, a nation which has pursued a consistently selfish, if not hostile tariff course toward this country. Sentiment in Canada is strongly in favor of the purchase of British goods rather than American. The opportunity is here for British traders to capitalize on this sentiment. To do so, they must take a lead out of the American book. They must send representatives here to get into close touch with Canadian conditions and market requirements. More vigorous merchandizing methods are essential. The appointment of an agent in Montreal or Toronto to look after the entire Canadian market is an absolute arrangement. There must be more vigorous commercial penetration and the results will justify the cost.—Calgary Herald.

Phosphates For Fertilizers

Manufacture Of Fertilizers On A Large Scale To Be Carried On In B.C.

The vast deposits of phosphates in British Columbia, to be converted into fertilizer by the Consolidated Mining and Smelting Company, will save the "wheat sick" parts of the grain belt in Western Canada and C. C. Castle, of Victoria, formerly member of the Canadian Grain Commission, the other day. "The ally," he said, "of the manufacturer of fertilizer on a large scale will be the greatest advantage the western provinces have ever known. The cause of increased yield, an earlier harvest, closer stement and bring a reduction of taxation."

A Large Order

Mrs. Highly-Tycoon: "And these are all the vacuum cleaners you have?"

Dealer: "Yes, madam, I have shown you all we carry."

Mrs. Highly-Tycoon: "Well, I'm afraid they won't suit. I want one from the Louis XV. period to match my antiques."

"Nurse," said an amorous patient, "I'm in love with you. I don't want to get well."

"Cheer up, you won't," she assured him. "The doctor's in love with me, too, and he saw you kiss me this morning."

Bill: "With who was your wife quarrelling last night?"

Albert: "Oh—er—she was scolding the dog."

Bill: "Poor beast—I heard her threaten to take the front door key away from him."

A lot of people would have fewer troubles if they would think less about the injustices of life and work more.

WINDOLITE The Improved
Glass Substitute

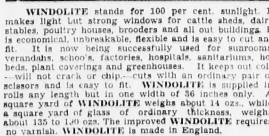

COMES WITH A MESSAGE OF HEALTH

THE sun is the all-powerful life producer. Nature's universal disinfectant and germ destroyer, as well as stimulant and tonic. WINDOLITE is the sun's most important ally.

Medical research has definitely proved that from the point of view of health and hygiene, the most effective among the sun's rays are the Ultra-Violet rays, which possess the greatest power for the prevention and cure of disease and debility.

Science has further established that ordinary window glass does not allow the passage of the ultra-violet rays. WINDOLITE is artificially excluding these vital health-giving rays. Therefore, the invention of WINDOLITE has completely solved the long-felt want. Exhaustive experiments have proved that WINDOLITE is a most effective substitute for glass, that it grows and develops plants and chickens and the well-being of cattle, enabled for the first time to have healthy light instead of disease-producing light.

Indeed, the discovery of WINDOLITE has during the last six years completely revolutionized the raising of cattle, enabled poultry breeding, increasing the egg-laying capacity of hens, and, in general, has greatly improved the health of cattle and is now being used in domestic and household requirements.

WINDOLITE stands for 100 per cent. sunlight. It makes light look through windows for cattle sheds, dairy stables, poultry houses, brooders and all out buildings. It is economical, unbreakable, flexible and is easy to cut and fit. It is being successfully used for sunrooms, verandahs, school's, factories, hospitals, sanitariums, hot beds, plant coverings and greenhouses. It keeps out cold, wind and draft or drip. Cuts with an ordinary pair of scissors and is easy to fit. WINDOLITE is supplied in rolls any length but in one width of 36 inches only. A square yard of WINDOLITE weighs about 14 ozs. while a square yard of ordinary glass weighs about 135 to 140 ozs. The improved WINDOLITE requires no varnish. WINDOLITE is made in England.

Price \$1.50 Per Square Yard, L.S.B., Toronto.

Mr. and Mrs. W. Pullen left
by auto on a holiday trip last
Thursday morning.

Pat took his wife to the
theatre for the first time. They
arrived early, and she was very
interested in everything about them.

Nudging Pat she whispered:
"What does the word 'adjective'
mean across the curtain?"
"Be quiet," said Pat. "That's
Latin for 'Welcome'."

Here and There

(144)
An effort is being made to es-
tablish an airport at Banff, Alberta.
Recently when the Canadian Pacific
freighter "Beaverford" brought two
De Havilland Moth planes, one case
of wings and two cases of spare
parts.

A further supply of airplanes and
airplane parts arrived in Montreal
recently when the Canadian Pacific
freighter "Beaverford" brought two
De Havilland Moth planes, one case
of wings and two cases of spare
parts.

A call for tenders for a large
elevator with a capacity of 1,500,000
bushels has been sent out by the
Saint John Harbor Commission.
The new structure is to be erected
on the Colwell Point Quay's work of
construction to be got under way
as soon as possible.

Farm For Sale

The Soldier Settlement Board of Can-
ada offers for sale by public tender—
The North half of Section Twenty-five
(25), in Township Twenty-one (21),
Range Eighty (8), West of the Fourth
Meridian, as described and subject to
the exception and reservations contained
in the existing Certificate of Title.
Terms of sale are not less than 20 per
cent of the purchase price in cash on ac-
ceptance of the tender, and the balance in
five equal instalments with interest at
five per cent per annum on the amortization
plan.

Each tender must be accompanied by
accepted cheque for \$100.00. If ten-
der is accepted, this sum will be credited to
the purchase price of the land. If
tender is not accepted, the money will be
returned to the tenderer.

Tenders will be opened at Calgary,
Alberta on Saturday, July 20, 1929.
The highest and any tender not neces-
sarily accepted. If the land is not sold
on the date above mentioned the Board
will be prepared to receive offers for pur-
chase until such time as it is finally dis-
posed of.

Tenders should be in plain envelopes
marked "Tender for the purchase of the
N. 1/2 of 25-21-8 W. 4th."
Address tenders and enquiries to—
The Soldier Settlement Board,
Southern Building,
Calgary, Alberta.

ter, from the States, are visiting
at the home of her parents,
Mr. and Mrs. T. Stewart.

Mrs. W. R. Brodie and daugh-
ter, Beatrice, were expect-
ed to leave on a holiday trip to
Strathmore, this morning.

Fresh Water Tiger

A 3 pound muskie captured by G. Clark of Toronto after an hour's fight with a light rod and noose pound ten line

Fishermen differ as to the fight-
ing merits of the various species of
the finny tribe to be found in
North American waters. Some
claim that, inch for inch and pound
for pound, the small mouth black
fish is the gamest fish that swims;
others are equally enthusiastic in
praise of the speckled brook trout;
while still another fraternity claim
that the catfish puts up as noble a
battle for liberty as any game fish
exists. All are agreed, however,
that the muscungee, sometimes
called the "fresh water tiger" is
one of the greatest fighters known
to anglers, and that he will put up
a battle royal when attached to the
business end of a rod.

One of the productive muscungee
streams in North America is
French River, in Ontario, Can-
ada, which connects Lake Nipisa-
sing on the East with Georgian
Bay on the West. This tangle of
waterways is not only the haunt of
the fighting muscungee but it
yields small and large mouth black
bass, great northern pike of enor-
mous size and pickerel in abun-
dant, as well as pan fish. Not long
ago a prominent New York busi-
ness man landed a 55 pound
"muskie" after a battle which will
probably satisfy his quest for a
thrill for the rest of his life.

French River is two hundred
miles north of Toronto on the
Subway Line. The French River
Bungalow Camp, a series of ex-
cellent bungalows centering
around a main club house, provides
comfortable accommodations for
the angler and his family. Jack
Strathdee, manager of this anglers'
retreat, is a genial host who is glad
to give the uninitiated fishermen a
few tips on how to lure the wily
"muskie." French River Bungalow
Camp has as its adjacent Pine
Rapids Camp, some 20 miles up
the river, and located just at the
spot where the "whoppers" are
likely to lurk.

FUEGO OIL CO., LTD.

Office Address: Oyen, Alberta.

Shares are now selling at \$1 a share.

Good progress is now being made and the
indications are very promising. Good flows
of gas have been met with also oil showings.
